

Dear Sirs.

Please as a ham radio operator dont cause us more interference than we already have.

I live in a Mesa County Colorado but we are close to the city limits. I have Excel Energy lines near me and Grand Valley Power. Both of which cause he grief on my amateur radio bands due to power line noise.

Using the power lines for internet connection will just radiate more spurious signal.

Why, the whole system now has inheriant problems..Loose hardware, loose ground connections, bad transformers and just plain poor installation and maintence of the power lines.

By radiating the power lines will just increase the problems I now have.

In addition to this is the problems I have with cable tv signals for the same reasone..Poor installation and very poor maintence and up keep.

Helps hear to help the public...Please how about insisting that the power companies and cable tv companies clean up there act. So we can be the backbone of communication for the country if a homeland security problem or natural occuring emergency does happen.

Sincerely yours

K0UK Bill Brown
