

To Whom It May Concern,

I am writing to register my opposition to the proposed use of power line for broadband use. The potential for interference is greater than the benefit. I'm the emergency management director for the county and we depend on amateur radio to supplement our communications during severe weather and other disasters. There are other services already in place that provide broadband service that is much more effective than what is being proposed. There are numerous sites on the web to get the evidence needed to see the potential for problems. Amateur radio plays an important part in our National security and is an all volunteer service that costs the taxpayers nothing. Thanks for the opportunity to express my objection. Please consider this very carefully.
