

Dear Sir, or Madam:

Let it be known my protest against Power Line Communication (PLC), or NOI 03-104. I believe that it will harm communications on amateur, shortwave, military, and NOAA HF weather broadcasts. Too much interference already exists on MW and SW bands to allow more of the same. Only licensed use of these frequencies should be allowed. The skywave properties of MW and SW are rare and valuable, and should not be wasted. Broadband digital communications should be limited to VHF and higher frequencies, and should not be introduced to medium wave (MW) and shortwave (SW). Please halt further development of this medium.

Sincerely yours,

David S. Forsman
