

The proposed BPL is very likely to increase RFI levels to intolerable levels. In a relatively rural area and in an area relying on weaker signal communication where I live, BPL could be a communication disaster.

BPL should be tested before the technique is irretrievably in place.

BPL would not comply with Part 15 restrictions in many instances.

As an amateur radio operator, I see BPL seriously limiting my ability to communicate especially in emergency situations with less than ideal antennas, transmitters and receivers.

Please delay any approval of BPL till more extensive testing can be done.

K. W. Covey
