

BPL will interfere with too many existing services. I live in a suburb of Los Angeles and enjoy "talk radio" and "sports games" which are broadcast on AM RADIO. BPL would interfere with my ability to enjoy AM RADIO. My Husband is a "shortwave enthusiast" and he would be prevented from hearing FOREIGN BROADCAST STATIONS such as BBC, VOA and others. What about interference to other services that have been around for many decades such as AMATEUR RADIO and CITIZEN BAND RADIO. I seem to recall a GENEVA CONVENTION that allocates various frequencies for a purpose, and the proposed BPL frequencies are already in use. BPL would interfere with the current users. Please do not let "Big Money" interests subvert what we already have and enjoy. I and most people that I know, have Cable TV hook up and a cable modem. Our Cable modem provides speeds of about 2.4 meg compared to our previous 56k phone modem. We have ZERO interference to our AM Radio from our current internet provider. No BPL.....Please.
