

Our phone company just started usage of broadband over phone lines.
I get 12Khz of Ten to Forty over 9 signal every 150Khz.
75 meters is the worst. But, All Bands Affected.
Frequency changes all day longso there is always interference
on some part of CW or phone bands. Complaints to phone company
are going to deaf ears there.
Please re-consider the usage and inability for us to communicate.
Thank You for the opportunity to comment.
