

To whom it may concern: Everything that I have read and or heard about Power Line Communications (PCL) is bad for the HF spectrum, Amature's in the US, Europe and other countries have experimented with this and it failed due to the amount of RF interfearence. Please vote this down as their is enough RF noise generated by the power companys as it is. They have a hard enough time trying to keep up with it now. Please vote NO.

Thank you for you time and consideration.
