

I am writing to oppose the Broadband Over Powerline. As the Emergency Communications Coordinator for my county, I am very aware of the difficulties that the utilities have in tracking and resolving interference with existing line noise. The radio amateur service and HF radio is integral to protecting the communication infrastructure for our country. It must be protected.

Studies in Europe and Japan clearly show the potential to compromise the HF service for amateurs and agencies such as the DoD which still use HF as an important part of their communications. BPL will cause interference. It will be "impossible" to track. Do not let it happen
