

I am very concerned at the "fast track that PLC/BPL is taking, especially given the risk of interference with other services. The public utilities are not the best shepherd of a clean RF spectrum (please see EMI/RFI issues with the power, and cable TV industries). Furthermore, this is unproven technology, and one that has been abandoned in other locations as unworkable.

The risk of spectrum pollution is SO great, that this issue should get the most stringent of reviews. In doing so, I'm sure that the Comission will reject it, given the risk to existing HF services.

Best regards,

John Brewer
