

As an Amateur Radio operator, I am concerned that BPL will very seriously degrade my ability to operate in the high frequency bands assigned to amateurs. The Amateur Radio service depends upon very sensitive equipment to carry on normal and emergency communications. With power lines being an integral part of almost every household, amateur receiving equipment, short wave receivers, CB equipment and other devices would be exposed to very strong RF radiation. Please consider this as Amateur Radio is a national resource this country should continue to maintain and protect.  
Sincerely Doug Hancock N0WVA
