

I am an Amateur Radio operator (AG4PJ) and I am very concerned about the potential for power line communications (PLC) to interfere with high-frequency (HF) radio communications in the Amateur Service, as well as other radio services. Studies done by amateurs in Japan and Europe have demonstrated the interference problems that can arise from some implementations of PLC (for more information, see the PLC information page at [<http://www.arrl.org/tis/info/HTML/plc/>](http://www.arrl.org/tis/info/HTML/plc/)). I urge the FCC to give the valid concerns raised by the American Radio Relay League (ARRL) the attention they deserve. Thank you.
