Re: Proceeding 03-104
Date 06-13-03

Dear Sirs/Madams,

This is in reply to the Notice of Inquiry # 03-104
After reading, listening and considering the facts about Broadband
over Power Lines I have decided that
it would not be in the best interest of the citizens of the United
States to allow this technology to be used.
Many people more qualified in a technical sense have already given
you the "Figures and how it Works"
comments. I have decided that the experts are correct in saying "Do
not let this happen under the existing
Part 15 Regulations".
I feel that politics and well monied industrial lobbyist arguments
should be swept aside and instead we
should use the true test of " Have I put the best interest of the
people / Nation first"? The out come should
not be decided because of some clever wordsmith's use of a phrase
or definition so as to "legally" gain the upper hand at the expense
of what's morally fair and right. This principal of " Putting the
People/Nation
First" is what sets us apart from the other nations of the world
and has made us great and will continue to
do so, so long as we do not loose sight of this principal.
I respectfully submit this comment for your consideration,

James H. Kidd Jr.
