

I am against putting broadband on power company facilities mainly because I have been fighting a losing battle with JCP&L (Jersey Central Power and Light) for six months because of massive noise problems and they won't even work on that. They have open Work Order number 307473379 open and have closed it three times without ever doing any work on it. The noise problem today is worse than it has been when I first complained about it and I keep getting shelved.

If this is how they treat complaints on simple noise generation problems, how are they going to treat us with RF radiation problems?

This bill is wrong from the start and will never work.
