

I am very concerned about the use of BPL and its affects on the HF Spectrum. I am an amateur radio operator and I expect the intoduction of BPL will cause a large amount of inteferring noise and will affect my ability to receive signals and enjoy my hobby. My amateur radio activities are also used as a public service and for emergency public service communications. I am also concerned that my legal and licensed operation may affect users of the BPL system. Other users of Part 15 devices, AM Broadcast Band users, as well as shortwave listeners will be affected by the introduction of BPL signals radiating throughout the HF spectrum. Broadband cable and DSL/telephone lines are clean methods and should be encouraged. Adding a redundant system that threatens the HF radio spectrum is highly undesirable. Please do not allow the introduction of this system that will result in radio frequency interference to occur. Thank you.
