

It seems to me that we, that is Amateur Radio Operators, are very concise about our radio emission confinement as not to interfere with other equipment. This idea is sending the message "Do as I say, Not as I do". I feel it's a great concept, but there has to be another way of doing it. Think. Think really hard. Maybe a shielded sleeve to slip on the existing wires? Costly, time consuming yes. With all the great minds that are around, I'm sure something can be thought of.
