

Amateru Radio Call sign N9BY

1. I have read and heard audio clips of interference from Broadband over powerline tests - They will render HF useless to Amateur radio, and I fear all other Shortwave Broadcast Station activity - I hope that my long time as an amateur radio operator will not be ended by greed.

2. If the power lines are used to have internet communication - what about amateurs transmitting - to now there was not a problem with our signal hitting powerlines, but now when there is money involved and our signals interfering with computers access to internet - though our signals are o.k. your rules. This looks on the surface to be the planned demise of Amateur Radio.

Please do not let this go forward.
