

I am strongly AGAINST Docket-03-104, Broadband Over Power Line (BPL). The potential for communications interference is likely and its impact on all forms of radio communication could be severe. To throw caution to the wind and allow the integrity of our Homeland Security communications systems to be put at risk in these dangerous times for the sake of internet monetary interests could be a GRAVE mistake. There is more at stake here than chat rooms, email and faster access to porno sites. The notion that "if it's better for the internet it must be good" is simply not true.
