

I rigorously oppose the Broad Band Powerline Communications Program now under consideration.

I believe it would cause undue interference to existing broadcast, military and amateur services already using this spectrum. It particularly concerns me as a member of the amateur radio service as it will impact very severely and negatively on our capability to respond in times of emergency and to continue to be an integral part of the communications system for Homeland Security.

Thank you for your consideration in this matter.

Robert D. Peterson, W7UT
