

I urge the FCC to reject the use of BPL in the United States until it can be shown that harmful interference does not occur to licensed users of the HF spectrum.

The Japanese equivalent of the FCC has already made similar studies, and because of their results have refused to allow the use of BPL. It would be a travesty if the FCC fails to use the same diligence as Japan and other countries and allows BPL use. Present licensed spectrum users expect and deserve this level of consideration.
