

As an Amateur Radio Operator I am against any new technology that will hinder or produce more problems for the HAM community. We deal with enough noise and QRM on our HF bands today. This new technology should be look at further and testing done within the Amateur spectrum to make sure it will not interfere with the HF bands of the Amateur Radio service. I am sure you would take the same precautions if it were something that was about to interfere with one of your favorite pastimes.

Sincerely,
Steve Drager
