

I am presently a licensed Amateur Radio Operator WA7NCL. I am very concerned about the possibility of high radio frequency interference in the Amateur Shortwave bands due to Power Line Communications (BPL). Technical analysis shows a high probability of this interference occurring. Please see articles in Compliance Engineering Magazine volume XX, No 3 2003 Annual Reference Guide, pages 46 through 63. These articles written by Diethard Hansen outlines in graphic detail the extreme impact the proposed systems will have on shortwave users. Also see the Feb issue of same magazine for an editorial concerning the impact of BPL on shortwave users.
