

As a current amatuer licensee, I must oppose the Broadband over PowerLine issue as a resolve for delivering Internet and other broadband services into homes and offices. While this idea deserves thought and mechanism, I do not believe dosing RF into the viable spectrum reserved for amatuer radio is the way to achieve this. We have and do abide by the rules of our spectrum and do encourage many positive aspects of the human spirit. Please do not silence this spirit with massive interference, which will surely follow any support for the premise of this proceeding.

Thank you,  
Terry Smith
