

I am very concerned over the potential for interference with public service and amateur communication radio communication. I feel that the FCC did not evaluate the use of various new communication modes such as NEXTEL. They are already in operation. They negatively affect emergency fire & EMS communication in my locale and in some cases make the emergency communication impossible. This is a serious problem that has not been adequately addressed. Please consider the negative impact realized and potential that BPL could entail. Big business will be pushing hard for BPL.
