

From my stand point, I am against ET Docket 03-104 since it would render most of the HF and lower VHF bands useless. We are already have more noise then some of us can over come. With the shifting solor cycle and other interferience BPL/PCL technology would bring on more then some of us could stand.

I use my equipment for emergencys, ARES/RACES drills, passing general traffic, and general communications. Thank you - W7BLM
