

FCC: Please vote this proposal DOWN.

As a amateur radio operator (N1PP), I am an avid listener to AM radio. I travel around northern New England, and find that power line noise now is swamping out broadcasts, especially in towns, villages and cities. I am surprised that the AM broadcasters are not also alarmed about this proposal, as it will only increase interference for them too. I hope the FCC decides to reject this idea, and instead confine these signals to shielded cables. Thank you for considering these remarks. Sincerely, George Foss N1PP
