

Gentlemen,

I am an Amateur Radio Operator (N1YVV) and Radio Astronomer. I am very much against Power Utility Company's being able to transmit BPL. I have no confidence in their technical ability to contain and eliminate RFI. I think that this will result in pervasive and widespread cases of interference, and will bring an end to any useful Radio Astronomy that can be done here on Earth. I am also convinced of the damage that will be done to other radio services.

The question here, is why is the FCC bent on this? Money. Why does the public need, yet another broadband delivery method. We do not. Do we, the public, want it? Again, we do not. Therefore, it seems, that you have no choice but to defeat this proposal and to disallow BPL.

Thank you.

David M. Ocame
