

We Strongly urge the F.C.C.to NOT expand the existing use of BPL/PLC applications. The Amatuer radio operators provide a very valuable service to emergency communicaions and community service activities and would be severely hindered by the "noise" factor generated by broadband services over power lines. It is our position the the F.C.C. obligation to protect ALL licensed users from interference must be continued and respected. There is already enough sources of "noise" without adding any additional problems.
