

I implore the FCC not to allow broadband signals to be carried over power lines. The disruption to the HF frequencies will be enormous. Already, due to now lax standards, the FCC has allowed all sorts of appliances to create QRM on the radio bands. I use the HF bands to get my news and information. Thousands of us will have our source of information cut off. The FCC has become known in recent years as the agency which is for sale to the highest bidder. Please become an agency which represents the interes of what used to be known as the American People. Thank you.
