

As both an RF/microwave engineer and as a licensed amateur radio operator, I participate in both technical development and in public and emergency services. As such, I urge that Broadband over Power Line (BPL) NOT be implemented as trialed to date. Rather than type in lengthy engineering rebuttals, I urge you to read those comments submitted by Micheal C. Tope, W4EF. I echo everything which he says, both from a policy and from a technical standpoint. Local noise levels and local (CC&R) ordinances already severely impact amateur radio services, public and disaster communications, and even other Part 15 activities. Please do not add to the list of burdens with BPL.

Sincerely,

Todd Nichols, Ph.D.

RF/microwave engineer and licensed amateur radio operator AG4AY
