

It is bad enough that this system could ruin one of the few avenues left for citizens to learn and enjoy long-distance radio but it will very likely be a security, health and safety issue as well. There is simply no way to anticipate the chaos this kind of broadband noise will have on hospitals, pacemakers, security systems, phone systems, emergency communications systems etc. This idea has no business being implemented by a responsible agency such as the FCC. Please put the general welfare ahead of money!
