

In more than one study it has been determined that BPL does cause a lot of interference. See attached URL: <http://www.ce-mag.com/archive/03/ARG/toc.html>

Since the Amateur Radio Service is an important resource for emergency communications and Homeland Defence, careful consideration should be taken before allowing a mode of BPL that would cripple such a resource. The power companies are just after money without taking existing national resources into account. This is irresponsible.
