

Dear Commissioners,

First of all, my sincere thank you for making this public filing system available. Secondly, thank you for taking the time to consider my opinion.

I am not a Luddite but I am an amateur radio operator. Hence, I am not against the concept of broadband internet over the nation's power grid in principal but I am concerned about the potential harmful interference.

The potential for harmful interference just doesn't affect amateur radio operators but the aviation community, public service community, scientific community as well as the defense community.

In my opinion the aforementioned community resources far outweigh any benefits that broadband internet may offer communities in terms of potentially harmful interference.

Before proceeding, I highly recommend that this procedure be thoroughly researched and even the remotest possibility of interference be eliminated.

Big profits often times motivate decisions and "bottom lines" many times for the detriment of overall public welfare.

Please table this procedure and take more time to research the full, long term effects of this new technology.

Thank you very much for your consideration.

Sincerely,

Ronald L. Ochu, Jr.
