

Please note that any use of a barely shielded, thick conductor, strung across the entire country, to transmit information in any form, creates interference, NO MATTER WHAT. The companies are claiming that this will not occur, however, it occurs NOW, with just electricity going through these lines. Allowing this to happen will render the HF bands USELESS. these bands are not just used for the ARS, they are used by the military, and public safety organizations all over the country, I'm talking Police, Fire and Ambulance services, these are necessary, and they have the installed base, the commission will place this equipment, and the people that depend on it, i.e. everyone, into peril.
