

Re Broadband Over Powerline.

Globewireless operates HF marine radio stations in the USA under FCC licence and operates additional HF radio stations around the world. Bands from 2 to 26 Mhz are used.

Globewireless has serious concerns about the effect that BPL could have on HF maritime communications, both commercial as well as distress and safety communications.

Globewireless feels strongly that BPL should not be allowed until exhaustive studies prove that it's use will not degrade distress, safety and commercial HF based mobile communications.

Peter Kierans, Globewireless Llc
