

I AM OPPOSED TO BPL - it is the ruination of frequency spectrum that is allocated to dozens of commercial and non-commercial entities.

The military, amateur radio, telephone, fire and police depend on the HF frequency space - these allotments are critical to the security of America - BPL will render them useless.

Existing technology is proven and is capable to deliver high speed access to those who want it - there is no barrier anymore to high speed access.

BPL requires costly investments in equipment and personnel to deliver it at a cost to those who will never use the technology.
