

I would like to go on record as being AGAINST docket 03-104. My power company, West Kentucky Rural Electric, (or as we in the radio business call them...West Kentucky Flicker and Flash) can barely cope with the basic job of providing electric power. I don't see how they can possibly be expected to supply broadband services when they can't (or won't) properly maintain their power distribution system. I have unresolved interference problems dating back as far as 14 years. My complaints, for the most part, have been met with indifference. Please don't let them ruin the radio spectrum any more than they have already.
