

BPL is a true interference threat to the Amateur Radio service as well as Public and Emergency Services that use the VHF and HF Spectrum. Early phase testing of BPL on the east coast shows that BPL devastates the HF spectrum with interference, taking away the ability to use these licensed frequencies for communications.

Amateur Radio is a valuable resource that provides public service and emergency communications. This is what makes Amateur Radio a valuable and relied upon service. BPL will take this service away from those that will benefit from it.

The FCC has promised to protect licensed users of the frequency spectrum. I urge the FCC to stand fast on that promise and keep BPL off of our licensed spectrum.
