

As an active amateur radio operator I wish to protest the impending approval of "Broad Band Over Power Lines" use by the FCC. That technology is already causing radio interference in European countries where it is installed and Japan has banned its use.

The resulting pollution of the radio frequency spectrum in the U.S. could not only lead to the demise of amateur radio here, but could cause dire problems for the commercial users of the affected frequencies.

Sincerely,

Jack Falkenhof, K4BYF
