

The BPL/PLC NOI under consideration has the capability of wiping out not only amateur radio services, but other licensed services within the HF/LOW VHF range of frequencies. The type of pulse that BPL sends out is incredibly strong. I can't believe that the FCC is even considering allowing this type of signalling on the airwaves. This will damages EXISTING services to the point of being unable to operate in a normal fashion. Please reconsider this very carefully.

Thank you!
