

Dear FCC,

I just wanted to comment that I am strongly opposed to the addition of power line broadband. Although broadband being able to reach anyone over power lines would be great, the interference to the HF amateur radio bands is so great that it would put an end to amateur radio communication.

HAM radio has never seen such a great threat as this one. Please reconsider allowing electric companies to do this so we can keep the asset of amateur radio around.

THanks,

Matt Jones
