

Broadband over Power Line (BPL) will likely cause all of my amateur radio station activity to come to a abrupt halt. My station is located about 30 feet from my neighborhood's electric distribution line and of course it is connected to all electrical wiring in my house. It's bad enough dealing with Part 15 interference these days in the amateur radio bands but BPL will be the bitter end of any usefulness of my FCC license W0KIE on the shortwave amateur radio allocations. Sincerely, Mike Reynolds CPA, MBA
