

From all I have read, discussed with others and listened to the test results of BPL in other parts of the world, please do not move forward with this service in the US.

As a ham and regular user of the HF bands, i do not see an overwhelming need for new means of broadband. IEEE 802.16a needs to be exploited to its fullest first. At 5.8 GHz spread spectrum, the potential for inteference is much reduced.

I implore the FCC to religate BPC to the shelf of ideas that do not receive further consideration.
