

Please do not allow Broadband Power Line (BPL) powerline (PLC) signals to be sent over the electrical lines to provide internet service. This pollution will make amateur radio communication virtually impossible. I have seen a test of this form of radio interference, and these signals are highly destructive to the communication process. Amateur radio is a valuable national resource, especially in time of emergency. I hold the highest class of amateur radio license, and have enjoyed ham radio since 1975. Please protect the interest of tens of thousands of ham operators.

Thank You,
Robert A. Haynes
