

I am opposed to any further approval of Broadband over Power Line operations. As a licensed Amateur Radio Operator, I own and operate High Frequency (HF) radio equipment from my home for my personal enjoyment.

I also use that equipment to participate in various Amateur Radio Emergency Services activities such as disaster relief radio traffic. BPL would render my HF radio equipment useless to me.

More importantly, it would also render my HF equipment useless to those in need of disaster relief who are trying to communicate through Amateur Radio to the American Red Cross and other relief agencies.

If I (and thousands of other Hams) can't hear their call for help, they won't receive the aid they need.

Please watch and listen to the Audio and Video evidence being presented by our national organization, the ARRL.

I know you will share my concern when you hear for yourselves the disruption BPL causes to HF communications.

Please stop BPL technology now. The potential profits to a few are far outweighed by the loss of our ability to handle disaster relief traffic.
