

Sirs:

I am a concerned Ham radio operator, KD7DCR.
In view of previous interference problems with Part 15 products, I must stand
and be heard on this most serious matter now before you.

I do not see where any form of data or other messaging over power lines, in
cities or the country, can safely use our crowded freq's in the HF (1.8 to 30
mHz) bands where we are presently the primary user. I must ask you to deny any
such usage until absolute test data and other suitable proofs are presented and
reviewed by my peers showing that devices and methods then existing will allow
this use without interference to my rightful use of these bands.

Thank you,
Mel Frost
KD7DCR
