

I have been a licensed amateur radio operator for 34 years. I live in a rural area that does not have high speed internet access, except for satellite service. I am willing to wait for cable or DSL access instead of pushing for BPL. This mode (BPL) will make the radio bands unusable and I feel the power companies will not be in a position to respond to interference complaints which will result. Up till now the power companies have not had a good track record of solving existing interference and this BPL mode will only increase complaints. Let the power companies deliver power and the ISP providers do the internet. If you want to help get high speed access to all users, subsidize the phone companies so they can update their infrastructure and drop BPL!!!!!!
