

Commissioners:

Please accept this comment AGAINST the authorization of Broadband Over Powerline (BPL). Recent field tests by the American Radio Relay League at BPL test locations have shown drastic increases in noise directly attributed to BPL across large portions of HF spectrum.

Not only does this violate FCC Part 15 rules, it also makes this spectrum virtually worthless to ANY narrowband licensee, including government and amateur holders.

I encourage the Commission to follow the lead of Japan NTT, which has NOT authorized BPL due to the interference impact to other spectrum users.

Sincerely.

Keith J Morehouse
Hampshire, IL
FCC license holder: W9RM, K9NS
