

Sir, I am a ham radio operator and have been one for almost 50 years now. I have heard tapes of tests performed by the American Radio Relay League (ARRL) on HF (2 - 30 Mhz) and am very concerned that the implementation of BPL will destroy my life long hobby. The utility companies say that there is no interference yet testing

shows there is. I would assume that this could be resolved very easily by FCC testing. Also I note that the JARL (Japanese Amateur Radio League) and the Japanese utilities went through this same process recently and they concluded that BPL, even at low levels, caused significant interference to ham radio operators, government agencies and emergency service radio communication. I urge further testing before implementation of BPL.

Thank you, Bruce Makas, Amateur Radio Operator K1MY
