

I wish to say that the BPL issue will be of one that is a major source of interference to amateur radio. I have been following this issue, and have seen the results of the test results in the 4 cities where trials are taking place. I urge you to not let BPL pass, it will be sacrificing amateur radio bands to broadband providers. Amateur radio has been an important entity in the US as well as outside. Do not make us secondary users on our primary bands.
