

I think that the proposed BPL legislation or the very thought of this concept being implemented in my area will change Amateur Radio HF usage as we know it and will find the recovery of such systems will be nearly impossible.

Why not stick with the conventional Broadband technology in the form of Fiber Optic Cables below ground and leave well enough alone?

I do not use HF frequency allocations allowed to me since being issued my Ticket but do plan to once I upgrade to a General Class license and would appreciate it if the FCC could represent all of us here in the Amateur Communities throughout the USA by not supporting such a move to BPL.

Thanks for your time and this opportunity to voice my opinion on this subject.
